Dense Body (Empirical)
Empirical Tail max(q_m^{emp}, u_m)
STACP Spliced Tail (EVT/GPD)
Monotonic Extrapolation
Provides a continuous, structured
candidate space for LTT.
Sparse Tail Region
Sample Variance Collapse
Plateaus at max observation;
halts FST sequence prematurely.
Extrapolated Quantile Score $q(\beta)$
Target Index Level $\beta \to 1$
u_m
$1-\zeta_u$
